OrbitNote — Product Manual (Sample Dataset)

Fictional note-taking application manual designed for retrieval and grounded-answer tests.

1. Overview

OrbitNote is a fictional note-taking app for organizing notebooks, searchable notes, images, and audio transcripts. It supports desktop and tablet use. Offline editing is available in the desktop app, but cloud synchronization requires an internet connection.

2. Notebooks and tags

Users can create up to 100 notebooks on the Basic plan and up to 500 notebooks on the Pro plan. A note may have up to 10 tags. Tags are case-insensitive, so 'Project' and 'project' are treated as the same tag.

3. Search

Basic search matches words in note titles and body text. Pro search also searches text extracted from attached PDFs. Search does not currently index handwritten text inside images. Newly imported PDFs may take up to two minutes to become searchable.

4. Importing files

The maximum size for one PDF import is 40 MB on Basic and 200 MB on Pro. Scanned PDFs can be imported, but OCR may be less accurate for low-resolution pages or handwritten annotations. Password-protected PDFs must be unlocked before importing.

5. Sync behavior

When online, OrbitNote attempts to synchronize changes within 30 seconds. If two devices edit the same paragraph while offline, the app preserves both versions in a conflict copy instead of silently overwriting either version. Users should review conflict copies before deleting them.

6. Sharing and permissions

A notebook can be shared as Viewer, Commenter, or Editor. Viewers can read and export notes but cannot change content. Commenters can add comments but cannot edit note text. Editors can edit, add, and delete notes. A public link grants read-only access and can be disabled by the notebook owner.

7. Security

OrbitNote recommends enabling two-factor authentication and using a unique password. Shared links should not contain confidential material. The fictional service encrypts data in transit, but this sample manual makes no claim about real-world products or certifications.

8. Plans and limits

Basic is free and includes 2 GB of cloud storage. Pro costs ■299 per month and includes 100 GB. A user can check current storage usage in Settings > Account > Storage. Downgrading to Basic does not immediately delete existing files, but uploads pause if usage exceeds the Basic limit.

9. Troubleshooting

If sync is delayed, confirm internet access, check that the account is not over its storage limit, and restart the app. If PDF text is missing from search, verify that the file is not password-protected and allow up to two minutes for indexing. If a conflict copy appears, compare both versions before keeping one.

10. Keyboard shortcuts

On Windows, Ctrl+K opens search, Ctrl+N creates a note, and Ctrl+Shift+N creates a notebook. On macOS, use Command in place of Ctrl. Shortcuts may not work while the cursor is inside certain text-entry dialogs.
